Director
Big Data Institute (BDI) Public Organization

The FutureEd Fest event was very interesting because we rarely see outdoor activities that are bright, friendly, and communicative. The children who came feel welcome to join, and exchanges included basic AI technology that everyone must eventually encounter, especially children in today's era. Children must have skills in order to adapt so that AI cannot replace us. We would like to invite parents, guardians, and students to join the next event because they too have technical knowledge in many fields to help develop learning on holidays and weekends.

Participant
FutureEd Fest 2023

I gained new communication techniques and strategies that can be taught to children. I was impressed by the presenters as well as the coordination team. There were a variety of Workshop topics for us to choose from which help Thai teachers use and actually apply various techniques and methods to help develop the classroom for the better. Next year, I want to have more good activities. The exhibition section had a variety of schools from all over the country that inspired us to further develop students at our school.
